

P-clips for threaded rod

P-clips are recommended when using fully threaded rods (HGS). This is a flexible and simple solution for centering and holding the HGS in place when they are to be bolted into a drill hole. This is typical for technical bolts in tunnels, for example. P-clips can be mounted from the side wherever desired. The number can vary according to need, the size of the hole, the angle, as well as the weight/length of the HGS, but it is recommended to use at least 2 pcs. per HGS.

Stock programme:

P-clips for M16 / hull Ø22-28

P-clips for M20 / hull Ø26-28

P-clips for M24 / hull Ø30-32

Technical information:

Material: Nylon

Color: Black

Accessories:

Threaded rod M16

Threaded rod M20

Threaded rod M24

Recommended borehole:

Threaded rod M16: Ø22-28

Threaded rod M20: Ø26-28

Threaded rod M24: Ø30-32
