

Back plate w/large rubberjoint Ø140 Pc-Coat

Back plate for the rear side of the membrane. The back plate is threaded onto the bolt to the preassembled nut. The rubber seal acts as a seal between the bolt and back plate. When the plate is pressed against the membrane it forms an excellent seal. The rubber seal also ensures that the back plate remains on the bolt during assembly. In the event that the rubber seal becomes damaged, for example by being pulled off of the bolt after assembly, it is recommended that the rubber seal should be replaced. Rubber seals are stocked as spare parts.

Stock programme:

Back plate M16 w/large rubberjoint Ø140 1.4462

Back plate M20 w/large rubberjoint Ø140 1.4462

Back plate M24 w/large rubberjoint Ø140 1.4462

Technical information:

Material: stainless steel 1.4404 or duplex steel 1.4462 according to NS EN 10088-1

Thickness 2-3 mm, weight 0,3 kg.

Accessories
