

Wire clamps HDG

Wire clamps are used to make a loop on the wire, with or without insert inside. In addition, the wire clamp can be used to clamp 2 pieces of rebar bolts in the crossing each other as part of the stiffening or longitudinal to extend the bolts in the tunnel. All components are in HDG to ensure long service life.

Stock programme:

Description	Wire dia.	B1	U-Bolt dia.	Key with
Wire clamp 16	(5/8)	17	M12	19
Wire clamp 20	(3/4)	20	M12	19
Wire clamp 22	(7/8)	23	M12	19
Wire clamp 26	(1)	27	M16	24
Wire clamp 30	(1 1/8)	32	M16	24
Wire clamp 34	(1 1/4)	36	M16	24

Technical information:

Wire clips according to DIN 741, supplied with nuts.

For our HDG("VF") clamps all components are delivered Hot Dip Galvanized.
Quality A4, AISI316

NOTE! Set as close to the wire insert as possible, if used. The distance between the wire clamps should be approx. 2 x wired diameter. U-Bolt should never stand on the wire side, but on the "wire loose tamp".

Wire clamp is not approved for lifting.
